

# CLINICAL FOCUS (2020)

The following is a list of the most commonly prescribed drugs. It represents an abbreviated version of the drug list (formulary) that is at the core of your prescription-drug benefit plan. The list is not all-inclusive and does not guarantee coverage. In addition to using this list, you are encouraged to ask your doctor to prescribe generic drugs whenever appropriate.

**PLEASE NOTE: Brand-name drugs may move to nonformulary status if a generic version becomes available during the year. Not all the drugs listed are covered by all prescription-drug benefit programs; check your benefit materials for the specific drugs covered and the copayments for your prescription-drug benefit program. For specific questions about your coverage, please call the phone number printed on your member ID card.**

This may result in your provider prescribing, when medically appropriate, a different brand-name product or generic equivalent in place of the original prescription. Generic medications contain the same active ingredients as their corresponding brand-name medications, although they may look different in color or shape. They have been FDA-approved under strict standards.</p> <p>In most instances, a brand-name drug for which a generic product becomes available will be designated as a non-preferred or excluded option upon release of the generic product to the market.</p> <p><b>For the physician:</b> Generics should be considered the first-line of prescribing. Please prescribe preferred products and allow generic substitutions when medically appropriate. Brand-name drugs are listed in CAPITAL letters; generic drugs are listed in lower case letters.</p> <p>This drug list represents a summary of prescription coverage.
